Office Action Summary

Application No.

09/825,051

Applicant(s)

BRAUD ET AL.

Examiner

Baoquoc N. To

Art Unit

2162

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 04/04/2005.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-52 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-52 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

AT

DETAILED ACTION

1. Claims 1-52 are pending in this application.

Continued Examination Under 37 CFR 1.114

2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 04/04/2005 has been entered.

Response to Arguments

3. Applicant's arguments filed 04/04/2005 have been fully considered but they are not persuasive.

Applicant argues that "Swanson discloses does not teach or suggest determining whether the data stored in the ancillary system is accessible for real-time processing into a value into a value of a data item as recited in amended independent claims 1, 21 and 41.

The examiner respectfully disagrees with the above argument. Swanson discloses the method retrieving the data according to the input parameters (col. 7, line 8-14). In the discloses, Swanson does not mentioned or indicate anything including "event if data is not accessible for real-time processing into a requested value but satisfies the input parameters as applicants mentioned in the argument." Since real-time is so abstract, the recited "real time" is interprets as long as the request is serviced

Art Unit: 2162

by other servers connected in the network, connection is maintained, then it is real time processing.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Swanson et al. (US. Patent No. 6,112,183) in view of Wagner (US. Patent No. 6,092,102).

With respect to claims 1 and 21 Swanson teaches a data processing system implemented method for managing data of an enterprise network that includes a plurality of ancillary system and an enterprise data processing system having an enterprise database, comprising:

receiving a request at the enterprise data processing system for a value of a data item (the client request) (col. 5, lines 5-10);

identifying an ancillary system of the plurality of ancillary system associated with the requested data item (the client stub 60 locates the appropriate server to handle the

Art Unit: 2162

request) (col. 6, lines 38-46), wherein data for the value is stored in the ancillary system (request for col. 6, lines 20-25);

processing the data into the value for the data item (col. 6, lines 63-65); and

returning the requested value for the data item (the client stub 60 unpacks the output argument and returns them to the client application) (col. 6, lines 63-65).

Swanson does not explicitly teach determining whether the data stored in the ancillary system is accessible for real-time processing into the value. However, Swanson teaches, "the request 64 for member enrollment information may be made by program 54 in the benefit subsystem 30. The benefit subsystem 30 holds information regarding the benefit plans" (col. 6, lines 21-25). In addition, Swanson teaches, "server stubs 62 are responsible for listening for client requests, unpacking the input arguments, validating server access, calling server function, packaging the return value and output arguments returned by the server code, recording audit information, gathering performance data and passing return value and output arguments back to client stub 60 over network 10" (col. 7, lines 8-14). Swanson does not disclose retrieving the data from one of the ancillary systems and the enterprise database based on said determining. On the other hand, Wagner discloses retrieving the data from one of the ancillary systems and the enterprise database based on said determining (col. 7, lines 38-52). Therefore, it would have been obvious to one ordinary skill in the art at the time of the invention was made to modify Swanson system to include retrieving data from sub system database and the main system database in order to obtain all the value for processing the client request.

Art Unit: 2162

As to claims 2, 22, and 42, Swanson further discloses identifying all data updated in the ancillary system since a last block transfer of data to the enterprise database; requesting a block transfer of updated data from the ancillary system; and copying the block of updated data to the enterprise database (col. 5, lines 1-5).

As to claims 3, 23, and 43, Swanson further discloses wherein processing the retrieved data into the value for the data item is performed subsequent to copying and prior to receiving the request (col. 7, lines 8-14).

As to claims 4, 24, and 44, Swanson further discloses wherein processing the retrieved data into the value further comprises aggregating the data into a value for the data item (col. 6, lines 5-10).

As to claims 5, 25, and 45, Swanson further discloses wherein the data stored in the ancillary system is more current than the data stored in the enterprise database (col. 8, lines 1-5).

As to claims 6, 26, and 46, Swanson further discloses the enterprise data processing system supports queries of the ancillary system (col. 4, lines 1-3); the ancillary system stores the data in relational database (col. 4, lines 1-3); the ancillary system stores the data in a database structure having a proprietary format (col. 4, lines 1-3); and a format of the data stored in the ancillary system (col. 4, lines 1-3).

As to claims 7, 27, and 47, Swanson further discloses attempting to contact the ancillary system (col. 5, lines 1-5); querying the ancillary system for the data (col. 5, lines 60-65); and receiving the data from the ancillary system (value) (col. 7, lines 5-14).

Art Unit: 2162

As to claims 8 and 28, Swanson further discloses attempting to contact the ancillary system based on the data stored in the ancillary system being accessible for real-time processing into the value (col. 5, lines 5-10); and receiving the data from the enterprise database based on the ancillary system being unresponsive, (col. 5, lines 5-10).

As to claims 9, 11, 29, and 31 recite similar limitations as discussed in claims 1 and 21; therefore, claims 9 and 29 are also rejected for the same reasons as given in claims 1 and 21.

As to claims 10 and 30, Swanson further discloses catching a message, wherein the message was generated by an ancillary system using a set of content rules and the message conforms to a message standard; opening the message; identifying the ancillary system based on the message, (col. 58, lines 38-42); accessing content conversion rules based on the identity of the ancillary system, (col. 48, lines 19-24); converting content from the message to enterprise information using the content conversion rules, (col. 48, lines 19-24); and storing the enterprise information in the enterprise database (col. 58, lines 27-28).

As to claims 12, 32, and 50, Swanson further discloses wherein the data item is a line item in a document (col. 7, lines 40-50).

As to claims 13 and 33, Swanson further discloses the enterprise database is updated with data from the ancillary system without employing automatic event trigger data transfer (col. 7, lines 8-14).

As to claims 14 and 34, Swanson further discloses calling a security model for requestor security information (col. 6, lines 54-55); receiving the requestor security information from the security model (col. 6, lines 54-55); and accessing a security key related to the requested data item based on the requestor security information (col. 6, lines 54-55).

As to claims 15 and 35, Swanson further discloses determining whether the data item relates to employee information or financial information; accessing management organizational information; and determining whether to return the requested data item value based on the requestor having access to the employee information (col. 8, lines 1-5).

As to claims 16 and 36, Swanson further discloses prior to calling a security model for requestor security information, determining whether the data item relates to employee information or financial information (col. 7, lines 31-37); and determining whether to return the requested data item value based on the security key (col. 7, lines 31-37).

As to claims 17 and 37, Swanson further discloses monitoring a clock for a predetermined time interval (col. 8, lines 1-5).

As to claims 18 and 38, Swanson further discloses receiving a second request for the value of a second data item (col. 6, lines 50-55); identifying an auxiliary datastore associated with the second data item (col. 6, lines 50-55); and retrieving the value for the data item from the auxiliary datastore (col. 7, lines 5-15).

Art Unit: 2162

As to claims 19 and 39, Swanson further discloses identifying an ancillary system related to the auxiliary datastore (col. 5, lines 1-5); identifying all data updated in the ancillary system since a last block transfer of data to the auxiliary datastore (col. 5, lines 1-10); requesting a block transfer of updated data from the ancillary system (col. 5, lines 1-10); and copying the block: of updated data to the auxiliary datastore (col. 5, lines 1-10).

As to claims 20 and 40, recite similar limitations as discussed in claims 2, 22, and 42; therefore, claims 20 and 40 are also rejected for the same reasons as given in claims 2, 22, and 42.

With respect to claim 41 recites similar limitations as discussed in claims 1 and 2, Swanson also teaches ancillary system access rules (col. 7, lines 32-37).

As to claim 48, Swanson further discloses wherein the enterprise is a healthcare provider (col. 7, lines 39-53).

As to claim 49, Swanson further discloses an automated interface for catching message and redirecting the messages to the ancillary system data transfer mechanism (col. 5, lines 1-5).

As to claims 51 and 52, Swanson teaches the method recited in claim 10, wherein the caught message was generated spontaneously by the message-generating ancillary system (col. 58, lines 38-42).

Contact Information

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Baoquoc N. To whose telephone number is at 571-272-

Art Unit: 2162

4041 or via e-mail BaoquocN.To@uspto.gov. The examiner can normally be reached on Monday-Friday: 8:00 AM – 4:30 PM, EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John Breene can be reached at 571-272-4107.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 305-3900.

Any response to this action should be mailed to:

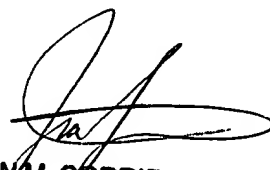

Commissioner of Patents and Trademarks
Washington, D.C. 20231.
